Sedimentology, Micropaleontology, Geochemistry, And Hydrocarbon Potential Of Shale From The Cretaceous Lower Colorado Group In Western Canada

J. D Bloch; Geological Survey of Canada

White Speckled Shale is potentially both a source and a reservoir rock for hydrocarbons. The Colorado Group thins eastward from about 700 m in southwestern Canada. Sedimentology, micropaleontology, geochemistry, and hydrocarbon potential of shale from the Cretaceous lower Colorado Group in western Canada. Sedimentology, micropaleontology, geochemistry, and hydrocarbon potential of shale from the Cretaceous lower Colorado Group in western Canada. Sedimentology, micropaleontology, geochemistry, and hydrocarbon potential of shale from the Cretaceous lower Colorado Group in western Canada. Sedimentology, micropaleontology, geochemistry, and hydrocarbon potential of shale from the Cretaceous lower Colorado Group in western Canada. Sedimentology, micropaleontology, geochemistry, and hydrocarbon potential of shale from the Cretaceous lower Colorado Group in western Canada. Sedimentology, micropaleontology, geochemistry, and hydrocarbon potential of shale from the Cretaceous lower Colorado Group in western Canada.
